Why Is It So?

A Science Passion Investigation

The children worked independently or in small groups to collaboratively complete a science based investigation as part of their ‘Going Further’ stage of our ‘Why Is It So?’ Inquiry.

The children were expected to stimulate curiosity about science and not only educate their audience about their ‘passion’ but nourish curiosity so we could all go on to explore science further.

We had a wonderful afternoon sharing, learning and celebrating together, as we roved throughout the 3/4 community. The children were required to record at least two new facts from each classroom, about an area of science, a scientific process or a scientist, that was new to them.

It was fantastic to have so many visitors accept their handwritten invitation from the children to come and build on their own knowledge of science.

Thanks, as always for your ongoing support!

Sue, Lynne, Meg, Elias and Sarah
